Additional file 4: Figure S3

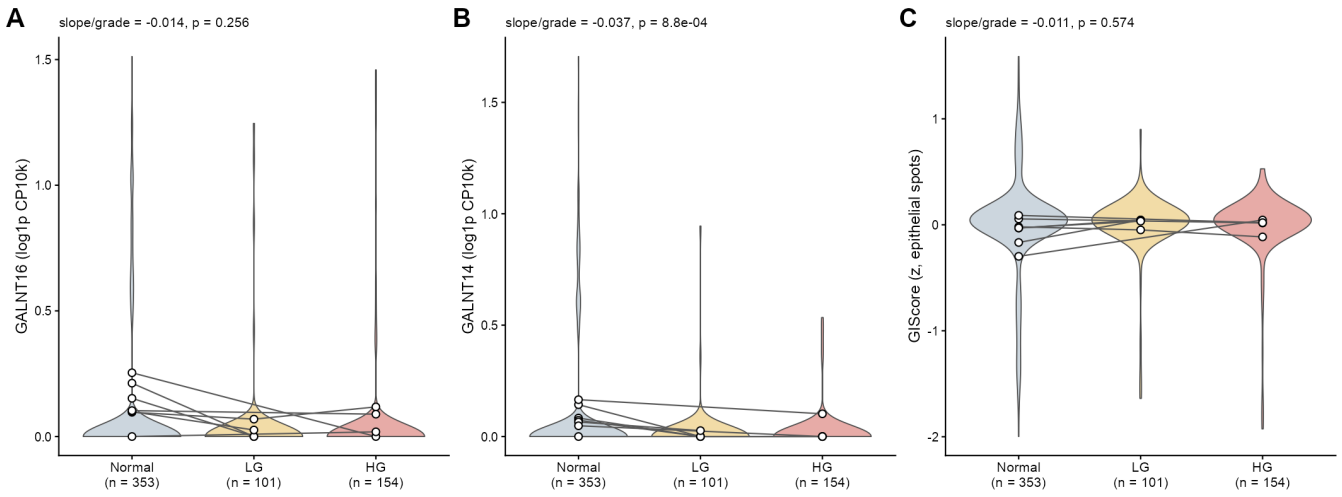

Figure S3. Spot-level GALNT16 (A), GALNT14 (B) and GIScore (C) by manual PanIN grade in GSE254829. Violin plots show spots and overlaid points/lines show slide means. The primary models use grade coded 0/1/2 and a slide random intercept; exact coefficients and P values are in H1_trend_mixed_model.csv. The analysis retained 608 epithelial-annotated spots from seven slides after the pre-listed library and nontissue exclusions. These are cross-sectional annotations of mixed-cell spots. Non-significant GIScore tests do not establish equivalence or longitudinal stability.
